

❖ Management

- **Stop** the transfusion immediately.
- **Oxygen therapy**
- **Intravenous diuretics** should be used appropriately.
- If more rapid volume reduction is needed, **therapeutic phlebotomy** can be used.

❖ Prevention

Donar sangre es donar VIDA

- Packed cell should be used instead of whole blood.
- Packed cells should be given slowly over 4.
- Diuretics should be given at the start of the transfusion and only one or two units of concentrated red cells should be transfused in any 24 hour period.
- Blood transfusion should be given during the daytime, Overnight transfusion should be avoided wherever possible.

Non immune complication

1

Bacterial contamination reactions.

2

Circulatory overload.

3

Transfusion haemosiderosis

4

Complications of massive transfusion

5

Non immune hemolytic reaction

6

Disease transmission
